Dear customer,

RE: WANTED HOMES TO SAMPLE WATER for Lead and Copper testing.

Water District # 1 of Midland County needs homes meeting specific criteria, to test for lead and copper in the drinking water. This will be done with no cost to the home owner. Our records indicate that your home may meet the required criteria.

The home must have copper plumbing installed before July of 1988. Solder used before this date most likely contained lead.

Samples would need to be drawn from the faucet most used for your drinking water.

The water supplied to that faucet must not be filtered or softened.

Our water, through this type of plumbing, could dissolve lead and copper into the water. That is why we required to have a sampling pool of homes meeting these criteria.

If your home meets the above criteria, and you would like it to be placed on our sampling list, please call Water District #1 of Midland County at 989-687-2709 and we will set up an appointment to review the plumbing and explain the details of sampling.

Participation would be greatly appreciated.

Thank you.

Ron Rose Water Superintendent.  
Water District No. 1
